

# ISO 55001

Manage business assets across their lifecycle, from acquisition to decommission

Manage business assets across their lifecycle, from acquisition to decommission

# ISO 55001

## What is ISO 55001?

ISO 55001 provides the framework for a structured Asset Management System. This will enable you to manage your business assets across their lifecycle, from acquisition to decommission. The system provides an efficient way to control the risks and costs associated with asset ownership, while supporting continual improvement and value creation.

## How do I become Certified?

Initially we will need to spend between one and two days on site assessing your current situation in relation to where the Standard requires you to be. Following this Review you will be issued a gap analysis, indicating any areas which require rectification prior to Certification. Once these agreed rectifications are carried out and QMS have produced your Asset Management System Manual, Certification is usually possible within 30 days.

**Following Certification, an annual surveillance audit is required to ensure your ISO 55001 Manual and Certification remain valid.**

Improved financial performance

Improved risk management

Standardised reporting

Enhanced reputation

Strengthened business growth

Enhanced environmental performance
